

$$y = \beta_0 + \beta_1 * x_1$$

$$y = mx + c$$

$$m = \text{slope} = \text{tangent} = \text{gradient} = \tan \theta = \frac{y_2 - y_1}{x_2 - x_1} = \frac{dy}{dx}$$

difference = $y_2 - y_1$ = difference in y = $dy = \Delta y$ = gradient
gradient means change
